One of the problems that has been attracting the attention of scientific men for a number of years is the pro-duction of an artificial material that will answer as a substitute for stone, and at the same time, in cost and ease of production, be comparable with brick or terra cotta. With the increase in the chemist's knowledge of cyrstalization and the ability to secure extremely high temperatures by one method or another, the manufacture of artificial stone has developed until now there has been placed on the market an there has been placed on the market an artificial granite which seems likely to be a most useful product for building and other purposes. Previous, artificial stone compounds have been made by the use of cement, plaster, and pulverised rock, or for decorative work by treating the surface of a plec of slate or other cheap and easily worked material with pigments and lapan, but the usefulness of such substances has been limited by the face that they would not withstand extreme of temperature and were acted upon by the weather. Furthermore, the strength and other physical properties possessed by these materials were not such as to make them substitutes for stone or brick.

After a series of experiments cover-

After a series of experiments covering a number of years, a, chemist named Educard Glardon has succeeded in producing a material which from tests already made, seems to possess all the essential qualities of kranite as well as greater strength and resistance to heat. To manufacture this substance, which is termed artificial granite, a company has been formed, and the plant, which has been under construction for over a year, is, now completed, and orders are being received for the new material. The factory is located on Staten Island so as to be adjacent to the clay-fields, the clay furnishing the chief constituent of the artificial stone. As is well knewn, clay is crystalized at a temperature of from 2,000 to 2,500 degrees Fahrenheit, and if treated with various chemicals it can be made to have different properties. In the manufacture of artificial granite almost any variety of day can be used, but different clays must be subjected to analysis, and the treatment for each variety is more or less different.

In making the new stone, recourse is had to the processes of nature where unlimited heat and pressure act on the elements and so produce the different forms of rocks and minerals. Just as in the manufacture of diamonds by the electric furnace, the crystallization is effected after the application of intense heat, following the method employed by nature, so, in making granite, the clay which contains the various gubstances going to make up that rock, with the admixture of certain chemicals. Is heated to a high degree, and crystallization takes place, giving, instead of the clay, a close and hard granite.

The process, according to Mr. Glardon, depends entirely upon the crystallization takes place, giving, instead of the clay, a close and hard granite.

The process according to Mr. Glardon, depends entirely upon the crystallization takes place, giving, instead of the clay, a close and hard granite, the clay are kept secret by the luventor, and the precise mode of applying the heat. The chemicals, for the most p

cery way to the natural gravite or marble after it has been similarly treated.

There is great diversity in the product, both in its appearance and in the purposes for which it is designed. Samples are shown having an appearance similar to fire-brick and are used in furnaces crucibles and boilers. Again, blocks are made for insulators, which, it is claimed, will stand an electric pressure up to 50,009 voits. Sidewalks can also be constructed from blocks of this material, while a future is claimed for it for paving streets, particularly in view of the increasing automobile traffic. In connection with paving, it is valuable, as any desired form of grooving or corrugation can be imparted to it in the press, so that the surface of the street, while quite smooth, will be such that horses will not slip.

The promoters of the new granite believe that in building operations it will prove of value, as the cost is much lower than granite or stone, while at the same time it is absolutely fire proof. It is in this respect that its chief superiority lies, as a temperature that will crack natural granite or marble does not have any effect on the substitute in fact it is fireproof up to the temperature of liquid steel, and is not affected by frost or weather. Polished samples are shown, which bear the most striking resemblance to the granite or marble does are shown, which bear the most striking resemblance to the granite or marble they are destined to imitate, and the cost is stated at about one-fifth, the artificial stone selling for from twenty to twenty-five cents a square foot, against \$1.26 to \$1.50 for granite in a similar condition. It is believed that mouldings, doorways, and other parts of a room now made of wood, on account of the expense attending the cutting of stone to a particular pattern, can be made of the new granite and thus decrease the amount of combustible material in a building. Artificial granite has been shown to be much stronger than the natural by a number of tests.—New York Post.

Miles Unanimously Elected. PITTSBURGH, Pa., July 17.—Major General Nelson A. Miles while here several weeks ago, made application for membership in Pittaburgh encampment No. 1, Union Veteran Legion. At the stated meeting to-night he was unani-mously elected.

Awfally Awkward. Life: Dorothy-Mamma, if I should die would I go to heaven?

"Why, yes, darling; of course you would."
"And if you should die, would you go.

to heaven, too?"
"I hope so, dear."
"I hope so, too; because it would be very awkward for me to be known as the little girl whose mother was in hell."

PERSONS troubled with diarrhoea will be interested in the experience of Mr. W. M. Bush, clerk of Hotel Dorrance, Providence, R. I. He says: "For several years I have been almost a constant sufferer from diarrhoea, the frequent attacks completely prostrating me and rendering me unit for review." quent attacks completely prostrating me and rendering me unit for my duties at this hotel. About two years ago a traveling salesman kindly gave me a small bottle of Chamberlain's Colle. Cholera and Diarrhoea Remedy. Much to my surprise and delight its effects were immediate. Whenever I felt symptoms of the disease I would fortify myself against the attack with a few doses of this valuable remedy. myself against the disease I would fortify myself against the attack with a few doses of this valuable remedy. The result has been very satisfactory and almost complete relief from the afflic-tion." For sale by druggists.

WHEELING WHOLESALE MARKETS

Weekly Change of Quotations in all Lines of Local Trade.

Office of the Intelligencer, Wheeling, July 18. Cattle have dropped since last week and hogs have advanced, which also affected provisions. Wheat remains at 65 cents, with a lot of new wheat coming in. Other changes are slight.

FINANCE AND TRADE.

The Features of the Money and Stock

Markets.

NEW YORK, July 18.—Money on call
sasy at 34,64 per cent; last loan 34, per
cent. Prime mercantile paper 34,544,
per cent. Sterling exchange steady, per cent. with actual business in bankers' bills at \$4 871/2674 87% for demand and at \$4 84614 8414 for 60 days; posted rates \$4 85@4 86 and \$4 88@4 88%; commercial bills \$4 831/2. Silver certificates 60@61c. Bar silver 60%c. Mexican dollars 48c. Government bonds irregular. State bonds steady. Railroad bonds irregu-

The stock market continued dull and neglected almost to the point of stagnation to-day. Prices drifted quite aim-lessly up and down except in a few stocks which were influenced by individual causes and net changes for the most part were very small. ing showed some slight animation and higher prices in sympathy with London which had advanced Americans before the opening here and which seemed to take a more chearful view of the gen-eral outlook. The money market there was reported rather easier in tone, but Bank of England continued to do practically all of the money lending at a rate well above its official minimum

rate of discount and sterling exchange

at continental centres showed additional sharp advances. In New York money was rather easier in tone, but the rates still postinued above those at some other domestic centres so that the sterling exchange market though hard was not quotably higher. It is intimated that money rates may be held up in New York to prevent an outflow of gold and the additional suggestion is heard that Chicago may supply London with some gold on direct movement. There are increasing offerings of Chicago funds in New York. Statements of earnings of railroads continue to break previous records, St. Paul leading to-day's returns with its second week of July increase of \$231,533 over last year. To-day's recovery in Brooklyn Transit amounted to 2 points net and in Metropolitan Street Railway to 1% per cent. Notwithstanding the fav-orable incidents the local stock market showed no disposition to follow London's early lead and the opening gains were soon lost. The only movements of any importance were in insulated stocks, mostly industrials. Sugar and Manhattan showed early depression, which was not entirely overcome in the case of the latter, though the former shows a small net gain. American Smelting rose at one time 2% and General Electric 1% points, but both reacted a point. New York Air Brake rose 6 points and then dropped 11. The Tobacco stocks came into late demand and gained from 1% to 2% per cent and gained from 12 to 23 per cent. The latter, Continental Tobacco, common, Rubber preferred, Leather preferred, Tennessee Coal, Tin Plate, Federal Steel, People's Gas and a few other stocks had periods of strength. . New York Central more than recovered yesterday's decline and some firmness was manifest amongst the grangers, Paci-fics and Trunk lines but the coalers, Southwestern and Southern stocks showed a slightly yielding disposition. Two whole days business footed up only a little over a quarter of a million shares and Brooklyn Transit, Sugar and Manhattan absorbed a large pro-

portion of this. The bond market was also very dull and prices changes were small and mixed as in stocks.

U. S. 3s coupon declined 1/4 per cent and the old 4s registered 1/4 per cent, while the old 4s coupon advanced 4/2 per cent in the bid price.

The total sales of stocks to-day amounted to 262,643 shares. amounted to 262,643 shares.

Breadstuffs and Provisions.

CHICAGO—Little speculative interest was displayed in the board of trade markets to-day outside of the provision pit. Wheat declined '\(\frac{1}{2}\)c correct constants of the provisions at a shade. Provisions advanced 10\(\frac{1}{2}\)limits to shade. Provisions advanced 10\(\frac{1}{2}\)limits to shade. Provisions advanced 10\(\frac{1}{2}\)limits to end of the provisions. Wheat opened weak at 71\(\frac{1}{2}\)71\(\frac{1}{2}\)c for September, which was \(\frac{1}{2}\)\(\frac{1}{2}\)c under yesterday's close. Fine weather everywhere, lower cables and the receipts of \$802\$ cars at Minneapolis and Duluth compared with \$57\$ cars last week and fifty-eight a year ago, were the chief influences at work in the market. With such enormous receipts and the sluggish demand for cash property, the bulls could see no encouragement for a rally in the immediate future and long wheat was thrown on the market in great quantities. September touched rally in the immediate future and long whent was thrown on the market in great quantities. September touched 70%c immediately after the opening. This was put price and buying against those privileges absorbed the bulk of offerings. Shorts covered freely on the decline, and the market gradually ralled to 71%c. On the bulke the demand slackened again and September reacted to 71c. Then the holders of puts made a second turn and this time it held until the close, which was at 71½671%c a net loss of only %c. Primary receipts to-day were 1,120,000 bushels, compared, with 427,000 the corresponding day of last year. Local receipts were 142 cars, twenty-three of which were contract grade.

twenty-three of which were contract grade.

Corn ruled weak on heavy liquidation. Leading local professionals who have supported the market steadily for the past three months gave up in despair, and threw their lines overboard. Local receipts of twenty-eight cars, together with extremely glowing accounts of the new crop which was reported to be favored with perfect weather throughout the corn belt combined to bring about the downfall of the buils. September opened 4.6% to lower 1.224.22% c, sold during the greater part of the session at 325.6323% and closed at 34% c, a set loss of 4c.

Oats ruled dull, but remarkably steady. September sold at the opening at 294.29% c, but good supporting orders were apparent at the evening figure and the market railled to 204.629% c at the close a net loss of only 1-16c. There was a little or no routine news outside of moderate cash demand.

Provisions showed remarkable strength throughout in spite of the evenlages in the grain markets. Con-

rovisions showed remarkable night throughout in spite of the Provisions showed remarkable strength throughout in spite of the weakness in the grain markets. Continued cash demand for both domestic and export purposes stimulated outside speculative buying. Added to this was an advance of 10915c for hogs at the yards. There was a silicht recension early on profit taking, but packers bought freely on the decline and caused a rally, which was still in progress at the close. September pork closed at \$9.30, a net gain of 15c; September ribs and September lard gained 10c each, closing at \$5.274,675,57%, respectively. Estimated receipts to-morrow:

Wheat, \$5 cars; corn, 450 cars; oats, 165 cars; hogs, 35.900 head.
